

Horizon::Zone::ZoneSocket
::on_close

Horizon::Zone::ZoneSocket
::on_error

Horizon::Zone::ZoneSocket
::read_handler

Horizon::Zone::ZoneSocket
::update_session

Horizon::Zone::ZoneSocket
::get_session

```
graph LR; A[Horizon::Zone::ZoneSocket::on_close] --> D[Horizon::Zone::ZoneSocket::get_session]; B[Horizon::Zone::ZoneSocket::on_error] --> D; C[Horizon::Zone::ZoneSocket::read_handler] --> D; E[Horizon::Zone::ZoneSocket::update_session] --> D;
```

The diagram illustrates a mapping from four source methods to a single target method. On the left, four white rectangular boxes are stacked vertically. Each box contains the text 'Horizon::Zone::ZoneSocket' followed by a method name on a new line: 'on_close', 'on_error', 'read_handler', and 'update_session'. On the right, a single gray rectangular box contains the text 'Horizon::Zone::ZoneSocket' followed by 'get_session'. Four blue arrows originate from the right side of each white box and point towards the left side of the gray box, indicating that each of the four source methods is associated with or mapped to the 'get_session' method.
