

Horizon::Auth::AuthServer
::initialize_core

Horizon::Char::CharServer
::initialize_core

Horizon::Zone::ZoneServer
::initialize_core

Server::finalize_core

```
graph LR; A[Horizon::Auth::AuthServer::initialize_core] --> D[Server::finalize_core]; B[Horizon::Char::CharServer::initialize_core] --> D; C[Horizon::Zone::ZoneServer::initialize_core] --> D;
```

The diagram illustrates a flow where three separate initialization functions on the left converge into a single finalization function on the right. The functions on the left are 'Horizon::Auth::AuthServer::initialize_core', 'Horizon::Char::CharServer::initialize_core', and 'Horizon::Zone::ZoneServer::initialize_core'. Each of these has a blue arrow pointing towards a central gray box labeled 'Server::finalize_core'.
